TIMES COLONIST

After five months, reef life abounds

SUN-SATIONAL

Royal British Columbia Museum marine biologist Kelly Howell holding a camera over one of the artificial reefs she dove off Pitt River last month. The three tanks placed alongside the pier in Pitt River yesterday are part of the Seamount Peninsula Artificial Reef Scheme, implemented to help artificially grow local corals. The reefs were built from discarded materials placed in the water last fall; several divers have been monitoring their growth to help verify the success. The sun-sational event of May 1997, which always includes meetings, exhibits, marine shows, and swimming.
