

The Qatar Scientific Club have invited all senior students in Qatar to participate in a reef ball project, which will involve the pouring and preparation of the concrete to form reef balls. This will then be transported to the selected location and set in place to form a reef. The scientific club have asked for twenty students to volunteer for the project. Schools taking part will have their section of the reef named after them and will be invited to monitor the progress of the development of the reef ball. Four to six of the twenty students will be invited to be taught how to dive free of charge and will be expected to help monitor the progress of the reef ball. The project is fully supported by the Qatari government.
