Reef Balls & Educational Signage

Titlow Beach

Dive Type: Shore Dive

Project Type: Habitat Mitigation & Marine Education

Description:

Habitat Mitigation: This is the second most popular shore dive in Tacoma. An old ferry dock and natural reef wall are great features accessible from the recently improved shore dive entry. While the creosote pilings associated with the ferry dock are slated for removal, there is abundant marine life on them. Using reef balls, we would like to replace the structure lost by removal of the pilings. We hope to transfer some of the sea life from the pilings to the reef balls.

Marine Education: Utilize the presence of divers and dive activity at the

water's edge to capture the attention of passing citizens. Add interpretive signage at this popular park that explains the Tacoma Narrows: its marine life, the habitat, uses of the resource, current issues, and possible solutions to the careful management and stewardship of Puget Sound.

Status: Conceptual. We have a source for reef balls.
